

ROYAL BADGES

Tips:

In general a badge design is composed of the following three components:

- 1) badge size / visible area: This is the visible part of the badge front.
- 2) print area (trimming): This part covers the side faces of the badge. This is required so that a look from the side on your badge does not reveal any white parts.
- 3) punching area: This line is **absolutely necessary** for the production process. Starting from a badge size of 32mm the area between the punching edge and print area needs to remain white.

Before saving your design you need to turn off/delete the lines for the badge size (visible area) and the print area in the template. You also need to turn off the "preview layer".

Designs and their outcome
